Career Brief

Ju-cheol Park

Web & Mobile Developer

jukrap628@gmail.com jukrap.vercel.app github.com/jukrap

Triphos Co., Ltd.

2026.02 ~ 2026.11

Web & Mobile Developer

Frontend development with React, backend development with Spring Boot and Django, and mobile app development.

Selected work

Web / AI

2026.09 ~ 2026.10

AI-Powered Document and Data Analysis Platform

Led migration of an existing system to a Django backend and React frontend, integrating its features and improving search and answer evaluation.

Decisions and verification

Completed long-answer evaluation — Fixed statement IDs, split long inputs and checked Ragas verdicts against the original targets.

Verification · Evaluated 25 claims in five batches; checked missing or duplicate IDs and malformed responses.

Internal processing: 2,969ms → 672ms — Reduced median processing time by removing repeated token counting and page analysis within a request.

Verification · Fixed model responses; 20 runs per condition after warmup.

Outcome

Delivered answers before asynchronous quality evaluation completed.

Web / API / Android

2026.07 ~ 2026.10

Transport Settlement and Vehicle Management ERP and Mobile App

Led ERP frontend development and feature development in the existing Spring Boot backend. Built mobile notification and document features, excluding the existing chat system.

Decisions and verification

Protected concurrent edits and batch imports — Preserved drafts for comparison and resaving. Rolled back failed Excel batches and returned existing results on retries.

Verification · Compared screens, APIs and database state in development; tested failures and concurrent requests in isolated MariaDB.

Connected mobile alerts and downloads — Resolved receipt-save deadlocks with a single UPSERT. Used short-lived signed URLs for PDFs without passing login tokens.

Verification · Tested reordered and duplicate alerts and concurrent receipts; matched browser-download hashes to originals.

Outcome

Prepared maintenance handover linking screens, APIs and database tables, with environment-specific launch settings.

Career Brief

Ju-cheol Park

Web & Mobile Developer

Selected work

Web / Android

2026.04 ~ 2026.06

Contract-Customer Parcel Web and Shipping Label App

Built the complete logistics web frontend and Android printing app.

Decisions and verification

Reduced initial JavaScript by about 74% — Loaded page and Excel code only when needed.

Verification · Compared standard production builds: 2,405.50kB → 616.60kB. Checked navigation, queries, Excel operations and PC printing.

Restored Bluetooth printer connections — Traced SDK calls to add missing discovery permission and distinguish request acceptance from completed printing.

Verification · Checked permissions, connections and physical output on Android 16; corrected clipped and overlapping addresses.

Outcome

Connected web queries and Excel imports to PC and Android label printing.

Additional work

Stock Auto-Investment and Account Management Web App

2026.02 ~ 2026.03

Built the complete React frontend against MSW mock APIs, including shared tables, filters and query and editing state.

School Transport and Attendance Management Platform

2026.09

Added member search, editing, duplicate merging, inquiries and attachments to existing web and Android apps. Checked member roles and authorship on the server and connected file selection and image previews in the app.

Parcel Pickup and Delivery Operations Platform

2026.08

Updated map-marker selection and return-to-map behavior. Retained delivery-completion requests and photos offline, restored requests after app restarts and compared them with completed server records before retrying.

Parcel Customer Website and Management Portal

2026.08

Updated an Excel-upload screen that labelled every failure as a timeout. Distinguished parsing, validation and communication errors, displayed the failed stage and elapsed time, and verified the changes locally.

Location-Based Daily Information App

2026.06 ~ 2026.07

Added weather, air quality and alerts through public APIs. Cached server responses by region and information type and displayed current weather and core forecasts first. Distinguished previous data from unavailable information after failed refreshes.

Chart Editor

2026.03 ~ 2026.04

Built chart settings, data connections and previews for a website under development. Connected chart-specific data fields and reduced unnecessary recreation to limit flicker and scroll movement.
