Resume

Ju-cheol Park

Web & Mobile Developer

jukrap628@gmail.com jukrap.vercel.app github.com/jukrap

Skills

Languages	TypeScript, JavaScript, Java, Python, Dart
Web	React, Next.js, Vite, TanStack Query, Zustand, Django
Mobile / hybrid	React Native, Expo, Flutter, Android, Gradle
Testing / monitoring	Vitest, MSW, Storybook, Sentry, Ragas
Tools & Data	GitHub Actions, Jenkins, Docker, MariaDB, SQLite

Experience

Triphos Co., Ltd.

2026.02 ~ Present

Web & Mobile Developer

AI Document and Data Analysis Platform

Owned full-stack development of document upload, search, analysis and source inspection, including Gemma 4 integration.

- Fixed evaluation targets and IDs to address changes in statement meaning during Ragas evaluation, then matched returned results to the original items. Evaluated 25 claims in five batches and checked missing and duplicate IDs.
- Used fixed model responses to separate application overhead from model latency. Removing repeated computation reduced median internal processing from 2,969ms → 672ms (20 runs per condition after warmup).

Settlement ERP and Mobile App

Owned full-stack development of the ERP and connected Flutter mobile work app, excluding the chat system.

- Designed conflict comparison and a separate save to preserve both server updates and user drafts. In development, checked a preceding API update, the 409 response, and the resolved save against the database and history.
- Kept Excel validation data on the server and rechecked it before saving. Tested failures, retries and concurrent saves in isolated MariaDB to verify rollback and duplicate-request handling.
- Separated notification content from receipts and replaced receipt writes with a single UPSERT after reproducing a database deadlock. Tested concurrent requests and out-of-order notifications.
- Delivered PDFs through short-lived signed URLs without passing login tokens. Compared browser-download hashes with originals and checked the values sent to the native bridge.

Logistics Operations Web & Printing App

Built the complete logistics web frontend and Android printing app.

- Weighed size savings against initialization complexity: split screens and Excel code, but deferred further splitting of authentication/API setup.
- Reduced the initial JavaScript entry file by about 74% with on-demand page and Excel code loading (build output size).
- Connected WebView print requests to an Android bridge and Bluetooth printers. Traced SDK calls to fix missing permissions and verified physical label output.

Stock Operations Admin Web

Complete React frontend built against MSW mock APIs

- Built shared tables, filters and modals for account, stock and order screens, with column pinning, resizing and reordering.
- Kept filter selections separate from applied query conditions; updated TanStack Query when the user submitted a search.

Daily Information App

Added weather screens and server-side public API integration to an existing Android app.

- Cached responses by region and data type with matching expiry periods. Displayed current weather and core forecasts first, then supplementary data as it arrived.

Privacy Check App

Added email-breach and deepfake checks to an existing Android app using external APIs.

- Built input, inspection request and result screens, with image previews and Android file selection.

TIS

2022.06 ~ 2022.07

University Intern / Planning and data automation support

- Planned factory energy management screens in Figma and documented database tables and an ERD.
- Analyzed the KEPCO Power Planner and wrote a Python crawler to collect energy data.

Web & Mobile Developer

Projects

AI Agent Playbook

2026.06 ~ Present

Solo developer

Built a tool that helps AI coding tools refer to project rules and work history across sessions. Users can select skills to install, change the setup and recover it while preserving existing files.

- Removed runner and scheduler features that overlapped with existing AI coding tools, focusing on records and skills. Verified CLI/MCP query scope and installation paths in Windows/Ubuntu CI.
- Used file ownership and hashes to preserve user edits, with backups and application records for recovery. Tested partial installation failures, conflicts, changes after inspection, and restoration.

github.com/jukrap/ai-agent-playbook npmjs.com/package/ai-agent-playbook

C. Donghae

2024.10.04 ~ 2024.10.06

Frontend developer / team of three

Built a map-based web service for Donghae Line passengers to find live transport and nearby information.

- Worked with two backend developers using Swagger documentation to connect APIs and build the main Google Maps screens.

ShareBBy

2024.04 ~ 2024.06

React Native app development and Firebase integration

Developed Android support and community features for an app that helps people share hobbies and find companions.

- Built post and comment creation, reading, editing and deletion, with location filters and sorting. Users can pull to refresh the list or scroll to load more posts.

github.com/jukrap/archived-rn-ShareBBy

Posture Teacher

2022.07 ~ 2023.05

Android developer / team of two

An Android app that finds body landmarks in camera frames, classifies sitting and plank posture, and records how long each posture is held.

- Built a MediaPipe AAR on Ubuntu and used landmark angles and lengths to classify posture and measure hold times.

Education & activities

Gyeongsang National University / Computer Science

Graduated 2023.02

GPA 3.64 / 4.5

Programmers Devcourse

2023.12 ~ 2024.05

Cloud Application Engineering, React and React Native

Programmers Devcourse / Assistant Mentor

2024.05 ~ 2024.09

Shared development resources and supported daily scrums and project reviews.

Awards

DIVE 2024 Global Data Hackathon

2024.10

Busan Technopark President Award / third in the challenge track

Gyeongnam Software Competition

2021.10

ESD HotDeal / Top Excellence Award
