Triphos Co., Ltd.

2026.02 ~ Present

Web & Mobile Developer

Built the settlement ERP across React interfaces, Spring Boot APIs, and database processing. Developed logistics screens and the complete React frontend for stock administration using MSW mock APIs.

Selected work

Web / API

2026.07 ~ 2026.09

Settlement ERP Platform

Built across the settlement ERP, from React interfaces to Spring Boot APIs and database processing.

Implementation

- Built shared editing tables with keyboard navigation and selection dialogs, retaining drafts after failed saves.
- Revalidated previewed data before saving and handled rollback and retries to prevent partial or duplicate finalization. Separated current assignments from historical transactions. Implemented recording of business changes and login results with an administrator query view.

Outcome

Connected table editing and bulk imports to a common save flow, preserved existing amounts after assignment changes, and delivered the implementation to the development environment.

Web / Mobile

2026.04 ~ 2026.06

Logistics Operations Web and Printing App

Built React and TypeScript interfaces spanning search, reservations, Excel imports, and label-print requests.

Implementation

- Built shared tables, forms, and modals, connecting server APIs to workflows from search and reservations through Excel previews and print requests.
- Identified code that was unnecessary on entry and loaded pages and Excel libraries only when needed.

Outcome

Reduced the initial JavaScript entry from 2,405.50 kB to 616.59 kB, about 74%, comparing output sizes on the same build basis.

Selected work

Web

2026.02 ~ 2026.03

Stock Operations Admin Web

Built the complete React frontend for a stock administration web app using MSW mock APIs.

Implementation

- Built list, search, detail, and create/edit screens with shared components, including pinned columns and column resizing.
- Queried MSW mock responses with TanStack Query while managing filters, selection, and modal state separately.

Outcome

Built query and edit screens against MSW mock APIs, reusing shared components and separating query data from interaction state.

Additional work

Member and Inquiry Management Web and App

2026.09

Extended an existing solution with member search, editing, merging, inquiries, and attachments. Integrated file selection and image previews in the Android app.

Parcel Delivery App

2026.08

Maintained maps and offline save/retry flows, restoring queued requests after app restarts.

Legacy Logistics Customer Support Web

2026.08

Implemented distinct messages for parsing, input, and network errors in Excel imports and checked them locally.

Daily Information App

2026.06 ~ 2026.07

Extended weather, air quality and alert features with public-data APIs. Deployed core-first loading, server caching and shared results for concurrent requests to reduce repeated API calls.

Chart Preview Page

2026.03 ~ 2026.04

Built chart settings panels, data connections, and previews as part of a website that was under development.
